

Password Change

User Manual

company@company.com
Phone Number

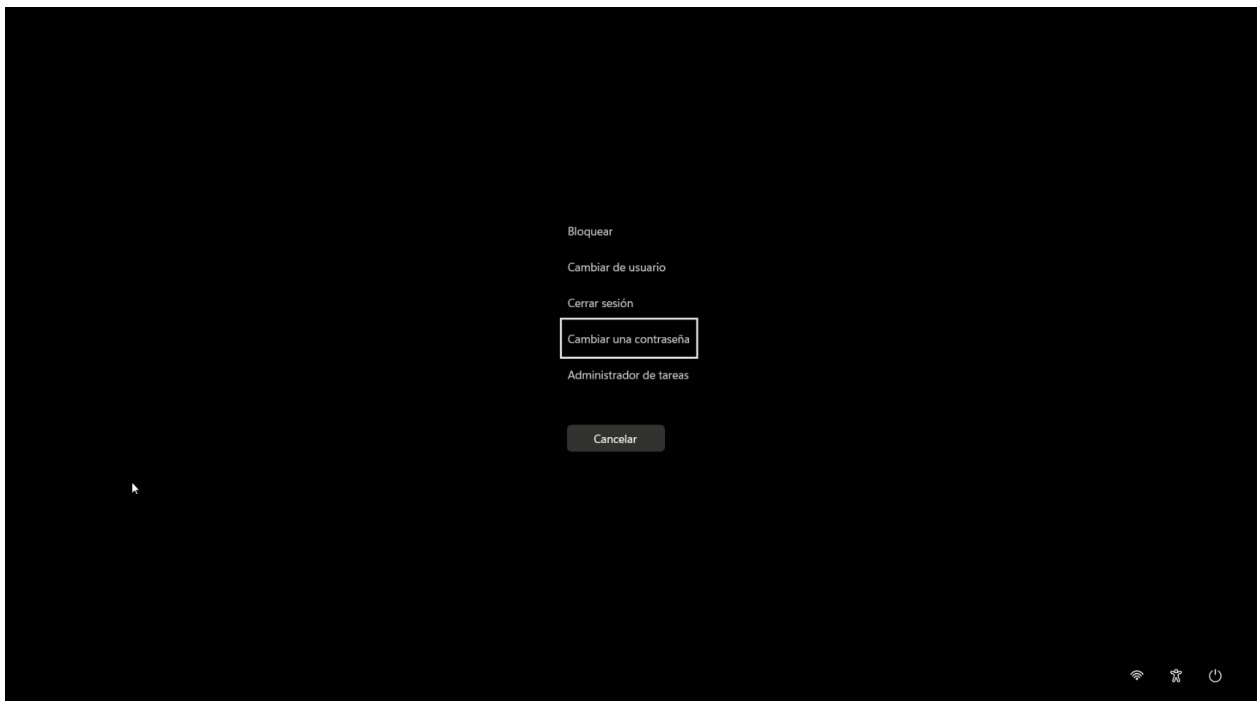

Revision Number	3
Creation Date	09/03/2026
File Name	password_change
Purpose	This manual describes the procedure for changing your password in Windows 11. The password being updated corresponds to the credential used to access the computer, corporate email, and associated applications.
Prerequisites	- The computer is powered on and a user session is logged in. - The current password is known. - The device has an active Internet connection. - Connected to an internal network, connected via VPN or configured with MFA via the Authenticator application.

Step 1: Access the Password Change Panel

1. Press the **Ctrl**, **Alt** and **Del** keys simultaneously on your keyboard.

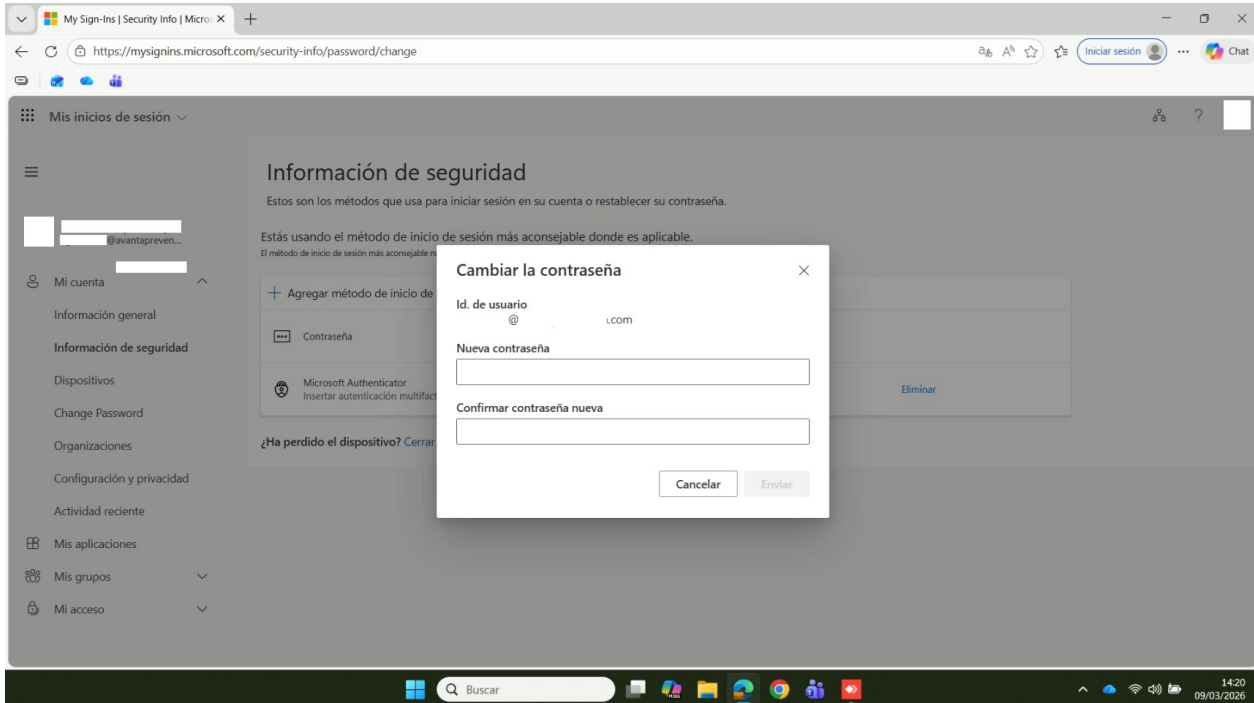

2. From the menu that appears, select **Change a password**.

Step 2: Change Password

1. The **Change Password** page will open automatically in your browser, allowing you to update your password.

(*) Additional authentication (MFA) may be required before reaching this screen.

Password Policy & Requirements

Your new password must contain at least:

- One uppercase letter
- One lowercase letter
- One number
- One special character (for example: !, @, #, \$, %, &, *, ?)
- A minimum length of 12 characters

Additional Restrictions:

- Cannot contain consecutive numbers (for example: 123, 456, etc.)
- Cannot start with a number
- Cannot include blocked corporate keywords (e.g., Company Name, Sector)
- Cannot contain personal information, such as your first or last name
